## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Lang.

Lang discloses an apparatus comprising a flexible material (10) having low permeability to a lighter than air gas, the flexible material (10) defining a chamber (the interior portion of reference numeral 10); at least one structured member (16) coupled to

the flexible material (10) such that when the chamber is filled with the gas to a known level, the apparatus is substantially neutrally buoyant under ambient conditions.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Barnes, III.

Barnes, III. discloses an apparatus comprising a flexible material (10) having low permeability to a lighter than air gas, the flexible material (10) defining a chamber (the interior portion of reference numeral 10); at least one structured member (38) coupled to the flexible material (10) such that when the chamber is filled with the gas to a known level, the apparatus is substantially neutrally buoyant under ambient conditions; a sleeve (34) coupled to the flexible material to retain the at least one structured member (38); the sleeve is heat welded to the flexible material, and the sleeve (34) and the flexible material are a same material. a plurality of flexible strips coupled to the flexible material to retain at least one structural member (38) adjacent to the flexible material.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lang in view of Barnes, III.

Lang discloses the claimed invention except for a sleeve coupled to the flexible material to retain the at least one structured member; the sleeve is heat welded to the flexible material, and the sleeve and the flexible material are a same material.

Barnes, III. discloses a sleeve coupled to a flexible material to retain at least one structural member, the sleeve and the flexible material are a same material.

It would have been obvious to one having ordinary skill at the time the invention was made to provide a sleeve coupled to the flexible material as taught by Barnes, III, since such a modification would secure the structural member to the inflatable device.

***Allowable Subject Matter***

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***
